ADDITIONAL INFORMATION

Projects

05/02/2023 – CURRENT

Baby Project This is a personal project, which aims to develop a system that tracks the activities of a baby: such as napping time, feeding, changing diapers and etc.
To develop the Backend part I'm using .NET 6, Entity Framework, Automapper, Restful API with double Authentication (JWT and Identity Framework), Versioning using Github.

You can check my project on https://github.com/panmelathoni

01/01/2021 – 05/05/2021

Smart Recycle - Freelance As a front-end dev I was responsible for create components, service layer to perform calls to the Rest/API, also I build the responsive UI. To access the app we perform a double auth (JWT, user /password or google and facebook). In this project we also used google maps API to find the nearest recyclable collection point.

01/05/2020 – CURRENT

CarTrip Project CarTrip is an application that shows you how much money you will spend and how many kilometers you will ride on a road trip, the user can choose between cars and storage the route and travel expenses.
To built this system I used Angular, a Google Maps API, so I created my own Rest API with nodeJS / JWT auth and I used ORM sequelize and Postman to test it before connect to the frontend side.
